# Cloud Web Hosting

Data Sheet

Fast, reliable and secure UK cloud hosting

Modern websites need the speed and stability that traditional single-server hosting struggles to provide on a consistent basis. That is why all our web hosting is cloud hosting.

"Our cloud platform adapts instantly to any changes, to make sure your website is always running."

By combining multiple servers to handle your traffic and data in a cloud optimized cluster, your website is not affected by any spikes in traffic or any technical issues that may occur with a server. Our cloud platform adapts instantly to any changes and makes sure your website is always running at peak performance.

You don't have to make any changes to the way you manage your website, or pay for extras to use our cloud hosting, we want all our customers to have the very latest hosting technology as standard.

Why choose our cloud hosting?"

Traffic spike? No problem

Our cloud hosting has been designed to instantly adapt to the demands being placed on it. No matter what time of day it is, or if you have an unusually large increase in traffic, your visitors won't notice any difference in performance.

Say goodbye to downtime

We have minimised the possibility of downtime, thanks to our huge network of load-balanced server clusters, all working to support your website.

Super-fast page load speeds

Your website's visitors don't want to hang around waiting for a page to load, so why make them? Use our cloud hosting enhanced page load speeds to increase visitor retention rates and satisfaction.
