## Virtual Private Servers

Virtual Private Servers (VPS) are the perfect solution for advanced websites, apps, and programs looking for increased flexibility, power, and control without the cost of a dedicated server. Ideal for web designers, developers, small businesses, and agencies demanding cutting edge VPS technology at a great price.

- Full root access
- Host multiple websites
- Advanced monitoring tools
- Dell and Intel hardware
- Out-of-band SSH access
- Free online control panel

## UK VPS hosting features

All our VPS use the latest Dell and Intel hardware for maximum performance and uptime and come with full root access as standard for full control and flexibility.

As well as fantastic technical specifications, our UK VPS come with these great features:

### **No overcrowding**

We never overcrowd a server or oversell any resources, which means you get exactly what you have paid for – no less. No matter what is being run on the server, our virtualisation technology makes sure the ‘private’ in ‘virtual private server’ means something.

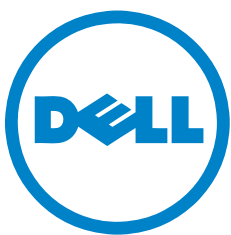

### **Online control panel**

Take control of your VPS with remote switch off/ restart, uptime monitoring, bandwidth charts, server status, and more. Add Plesk or cPanel to your VPS for even more flexibility and functionality.

### **Multiple websites**

Host multiple websites with your own virtual server, and by using cPanel or Plesk allocate resources on a website by website basis.

### **Dell and Intel inside**

All our virtual private servers are genuine Dell servers built specifically for virtualisation. This ensures you get the best possible performance from your VPS all day, every day.

### **More than web hosting**

Aside from using your VPS to host website files, or to complement existing resources, a VPS is also a great choice as a gaming, database, file, video, FTP, mail, anything you can think of server!
